Massive renovation of U.S. 60 through Tempe and Mesa will challenge motorists to "*share the Superstition*" with highway builders for the next two years.

Renewal of the Superstition enhances continuous efforts by ADOT to ease congestion on the aging highway, reduce travel times and increase safety.

Motorists will be "*sharing the Superstition*" as work advances to widen the freeway from Interstate 10 to Val Vista Drive -- nearly 13 miles of new HOV lanes from a new freeway to freeway link at I-10, additional merge lanes between traffic interchanges plus new general use lanes through Mesa.

Nearly \$200 million has been dedicated to the U.S. 60 revitalization project which will be designed and built under an accelerated schedule that will accomplish in two years what took more than a decade to create. Original Superstition construction between I-10 and Val Vista occurred between 1972 and 1983. Its renovation will be completed by mid-2003.

Till then, please "*Share the Superstition*" in support of this much needed project. We'll all share the benefits when its done.

Scheduled to begin in June, reconstruction at the I-10 / U.S. 60 transition provides an HOV freeway-to-freeway ramp.
